PRESS RELEASE

Datasection Inc.

Datasection Inc. (TSE Growth: 3905, headquartered in Shinagawa-ku, Tokyo; Representative Director, President and CEO: Norihiko Ishihara; hereinafter “Datasection”) hereby announces that, as of October 1, 2025, Datasection has entered into an agreement with an Australian data center operator regarding the use of a facility for the establishment of a new AI data center in Sydney, Australia.

The data center will initially commence operation in 2025 with a power supply capacity of 15 megawatts (MW). In 2026, an additional 45MW will be gradually added in phases, bringing the total planned capacity to up to 60MW.

This expansion into multiple facilities in Australia marks a highly significant milestone in our mission to build the most trusted AI infrastructure in the Asia-Pacific region. Taking into account increasingly complex global geopolitical risks, Datasection view Australia, where advantages exist in essential elements for AI data centers such as power supply and telecommunications infrastructure, as one of the most critical regions for our global strategy.

We remain committed to advancing the development of infrastructure that will underpin next-generation AI innovation across the Asia-Pacific region in the shortest possible timeframe.
