Datasection Inc.

Notice of Execution of Facility Use Agreement for AI Data Center in Australia

Datasection Inc. (TSE Growth: 3905, headquartered in Shinagawa-ku, Tokyo; Representative Director, President and CEO: Norihiko Ishihara; hereinafter “Datasection”) hereby announces that, October 9, 2025, Datasection executed a facility use agreement (hereinafter “the Agreement”) with a leading Australian data center services provider in relation to an AI data center project.

This agreement represents a separate project in addition to the facility use agreement previously announced on October 1, 2025, under the title “Datasection to Establish AI Data Center in Australia.”

This Agreement will further accelerate Datasection’s mission of building the most trusted AI infrastructure in the Asia-Pacific region, with Australia as a key hub. By leveraging the country’s state-of-the-art infrastructure, Datasection will be able to develop and operate the high-performance IT infrastructure essential for AI model development and large-scale computation, underpinned by a stable power supply and advanced security environment.

Under this Agreement Datasection plans to secure a phased power supply of up to 100MW during 2026, thereby establishing a framework capable of supporting AI workloads that require advanced cooling technologies. Combined with the project previously announced, the total power supply available for AI data center operations in Australia is expected to expand to 160MW. This will enable Datasection to meet the surging global demand for AI infrastructure and contribute to the advancement of AI innovation across the Asia-Pacific region.
