

24 March 2026

Press Release

Datasection Inc.

**Datasection to Make Its Debut at “Data Center Japan 2026”
President and CEO Norihiko Ishihara to Deliver
a Presentation on AI Infrastructure Strategy**

Datasection Inc. (Head Office: Tokyo; Representative Director, President and CEO: Norihiko Ishihara) made its debut at “Data Center Japan 2026”, one of the largest exhibitions in the data centre industry, held on 24–25 March 2026.

In addition, on 24 March, President and CEO Norihiko Ishihara delivered a presentation entitled “Redefining Business Strategy through the Development of AI Infrastructure as a Strategic Asset”, in which he outlined proposals regarding the form of industrial foundations essential for Japanese companies to regain international competitiveness.

In anticipation of the continued growth in demand for AI infrastructure, the Company is advancing the expansion of its GPU operations based on its proprietary AI cloud stack, “TAIZA”, and aims to scale to between 100,000 and 300,000 GPUs by the end of 2026.

“Data Center Japan” is one of the largest events in the data centre industry, organised by the Japan Data Center Council, a specified non-profit organisation, under the theme of “Critical Infrastructure Supporting an AI Society”.

With the rapid proliferation of generative AI, demand for AI infrastructure is expanding globally, and data centres are becoming increasingly important as a foundation of both society and industry. Against this backdrop, the development of next-generation infrastructure has become an urgent priority.

At this exhibition, Datasection, as a neo-cloud company, is showcasing the full scope of its AI infrastructure business, which is among the largest in the Asia-Pacific region.

■ Event Overview

- **Event Name:** Data Center Japan 2026
- **Dates:** 24–25 March 2026
- **Venue:** Tokyo Metropolitan Industrial Trade Center, Hamamatsucho Hall (2F, 4F and 5F)
- **Booth Number:** 5F, 5A-07
- **Organiser:** Japan Data Center Council (Specified Non-Profit Organisation)
- **Official Website:** <https://f2ff.jp/event/dcjapan?lang=en>

[Glossary]

Neo Cloud: A next-generation cloud platform specifically designed for AI computing demand, optimising GPU resources and physical infrastructure at a high level. Unlike conventional general-purpose cloud services, it refers to a purpose-built computing environment tailored for AI training and inference.
